                                       The present sequence represents a kappa chain of an antibody of the invention. The antibody is directed cytotoxic T-lymphocyve antiplen (CTLA) and Antibodies of the invention are composed of a heavy chain variable region, comprising a modified contiguous sequence from a FRI-FR3 sequence encoded by a human VH3-33 family gene. The modifications are contained in CDR1, CDR2 and/or framework regions. The antibodies may be used to inhibit CTLA-4 and down-regulate the immune system to treat hyperimmunity disorders (e.g. cancer). CTLA-4 stimulatory agents may be used to used to upoliferative disorders (e.g. cancer). CTLA-4 stimulatory agents may be used to upoliferative disorders (e.g. cancer). CTLA-4 stimulatory agents may be used to up-regulate immune system to up-regulate immunodeficient

invention. The antibody is directed cytocoxic T-lymphocyte antigen (CTLA)

4. Antibodies of the invention are composed of a heavy chain variable region, comprising a modified contiguous sequence from a RRI-FR3 sequence encoded by a human VH3-33 family gene. The modifications are contained in CDR1, CDR2 and/or framework regions. The antibodies may be used to inhibit CTLA-4 and down-regulate the immune system to treat hyperimmunity disorders (e.g. autoimmune disease, diabetes and graft rejection) and proliferative disorders (e.g. cancer). CTLA-4 stimulatory agents may be used to up-regulate immune system to up-regulate immunodeficient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 PGQAPRLLIYGASSRATGIPDRFSGSGSGTDFTLTISRLEPEDFAVYYCQQYGTSPWTFG 120

                                            The invention relates to antibodies that interact with osteoprotegerin ligands (OPGL). The antibody is useful for detecting the level of OPGL in a biological sample. The antibody, or the pharmaceutical composition comprising the antibody, or the pharmaceutical composition an inflammatory condition with attendant bone loss, an autoimmune condition with attendant bone loss in a patient or rheumatoid arthritis in a patient. In particular, the antibody or composition is useful for treating bone diseases, e.g. osteoporosis, bone loss from arthritis. Paget's disease, osteopenia, endocrine osteoporosis (e.g. Cushing's syndrome or acromegaly), osteogenesis imperfecta, homocystinuxia, Menkes' syndrome, Xiley-Day syndrome, osteomyelitis, hypercalcemia, or natioody kappa light chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New chimeric or human monoclonal antibody or its antigen-binding portion that specifically binds to and activates human CD40, useful for enhancing an immune response in a human, or treating cancer, HIV, neutropenia or

The invention relates to a novel chimeric or human monoclonal antibody or its antigen-binding portion that specifically binds to and activates human CD40. The anti-CD40 antibody of the invention demonstrates cytostatic, virucide, antibacterial, immunostimulant and anti-HIV such as cancer, virucide, antibacterial, immunostimulant and anti-HIV such as cancer, viral and bacterial infection or genetic, primary or combined immunodeficiency conditions including neutropenia or HIV infection. The anti-CD40 antibodies may also be useful for detecting CD40 in a biological sample in vitro or in vivo, as well as during gene therapy procedures. The current sequence is that of the human anti-CD40 antibody full length light chain protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 PGQAPRLLIYGASTRATGIPDRFSGSGSGTDFTLTISRLEPEDFAVYCQKYGTSAITFG 120

The invention relates to a novel human antibody (I), preferably a human monoclonal antibody which binds to an activation inducible lymphocyte immunomodulatory molecule (AILIM). (I) is useful for modulating signal transduction into a cell mediated by AILIM, for modulating proliferation of AILIM-expressing cells, for modulating production of a cytokine from AILIM-expressing cells and for inducing antibody-dependent cytotoxicity against AILIM-expressing cells and/or immune cytolysis or apoptosis of AILIM-expressing cells and/or immune cytolysis or apoptosis of AILIM-expressing cells and/or immune cytolysis or apoptosis of AILIM-expressing cells and/or immune cytolysis or apoptosis of AILIM-expressing cells. (I) is useful for treating and preventing various diseases associated with AILIM-mediated costimulatory transduction, and for inhibiting the onset and/or advancement of the cheumatoid arthritis, multiple sclerosis, autoimmune thyroiditis, allergic contact-type dermatitis, chronic inflammatory dermatosis, serious errhematosus, insulin-dependent diabetes mellitus, psoriasis, autoimmune or allergic diseases, immune rejection, disorders of the intestinal disorders such as ulcerative colitis, pneumonia, hepatitis, nephritis, vasculitis, and pancreative colitis, pneumonia, hepatitis, nephritis, vasculitis, and pancreative; (I) induces no serious antipenicity (HAMM) in a host. AAU743301 represent anti-human anti-mouse antigenicity (HAMM) in a host. AAU743301 represent anti-human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PGQAPRLLIYGASTRATGIPDRFSGSGSGTDFTLTISRLEPEDFAVYYCQKYGTSAI-TF 119

                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents the light chain variable region of the monoclonal antibody (MAb), KRIXI. This MAb produced by the call line of the invention, specifically recognises the wild type factor VIII light chain. KRIXI can be used to inhibit the binding of factor VIII light willebrand factor in a dose dependant manner. The new call line KXIXI, is deposited with the Belgian Coordinated Collections of Micro-organisms, under accession number LMBP 5089CB. KRIXI, or fragments of it, optionally with a thrombolytic agent, are useful for the treatment and/or prevention of hemostasis, coagulation disorder or thrombocit pathologic condition such as intravascular coagulation, arterial thrombosis, venous thrombosis or arteriosclerosis, and attentation of coagulation in a mammal. An effective and safe antithrombotic therapy is provided which reduces the risk of bleeding in mammals, more particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PGQAPRLLIYGASTRATGIPDRFSGSGSTDFTLTISRLEPEDFAVYYCQKYGTSA-ITF 119

The present invention relates to a pharmaceutical composition for the prevention and/or treatment of systemic inflammatory response syndrome (SIRS), sepsies spock, thrombus formation in the microvasculature and disseminated intravascular coagulation in mammals, comprising as an active ingredient a partial inhibitor of factor VIII, in admixture with a carrier. Such inhibitors may include the antibodies B02011 and KRIXI. The present sequence is the light chain variable region of KRIXI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PGQAPRLLIYGASTRATGIPDRFSGSGSGTDFTLTISRLEPEDFAVYYCQKYGTSA-ITF 119

                                                                                                                                                                                                                                                                                        The present sequence represents a kappa chain of an antibody of the invention. The antibody is directed cytotoxic T-lymphocyte antibody -4. Antibodies of the invention are composed of a heavy chain variable region, comprising a modified contiguous sequence from a FRI-FR3 sequence encoded by a human VRB-33 family gene. The modifications are contained in CDR1, CDR2 and/or framework regions. The antibodies may be used to inhibit CTLA-4 and down-regulate the immune system to treat hyperimmunity disorders (e.g. autoimmune disease, diabetes and graft rejection) and proliferative disorders (e.g. cancer). CTLA-4 stimulatory agents may be used to up-regulate immune system to up-regulate immune system to up-regulate immunodeficient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

The present sequence represents a kappa chain of an antibody of the invention. The antibody is directed cytocoxic T-lymphocyte antipagen (CTLA) 4. Antibodies of the invention are composed of a heavy chain variable region, comprising a modified contiguous sequence from a FRI-FR3 sequence encoded by a human VRI-331 family gene. The modifications are contained in CDR1, CDR2 and/or framework regions. The antibodies may be used to inhibit CTLA-4 and down-regulate the immune system to treat hyperimmunity proliferative disorders (e.g. cancer). CTLA-4 stimulatory agents may be used to yeel framework regions to the system to treat hyperimmunity proliferative disorders (e.g. cancer). CTLA-4 stimulatory agents may be used to up-regulate immune system to up-regulate immunodeficient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel antibodies capable of binding cytotoxic T-lymphocyte antigen (CTLA) -4 containing specified heavy and light chain sequences, useful for treating, e.g. immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PGQAPRLLIYGASTRATGIPDRFSGSGSGTDFTLTISRLEPEDFAVYYCQKYGTSAITFG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the use of human anti-cytotoxic T lymphocyte antigen-4 (anti-CTLA-4) antibody in the preparation of a medicament for the treatment of cancer such as bone cancer, pancreatic cancer, skin cancer, cutaneous or intraocular malignant melanoma, uterine and ovarian cancer, cancer of the anal region, stomach cancer, breast cancer, testicular cancer, uterine cancer and carcinoma of the fallopian tubes. The present sequence is human anti-CTLA-4 antibody kappa chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antiallergic; antiulcer; neuroprotective; antithyroid; vasotropic; immunosuppressive; dermatological; antiinflammatory; hepatotropic; activation inducible lymphocyte immunomodulatory molecule; ALLIN monoclonal antibody; allergy; rheumatoid arthritis; diabetes mellitus; multiple sclerosis; autoimmune thyroiditis; psoriasis; hepatitis; allergic contact-type dermatitis; ohronic inflammatory dermatosis; systemic lupus erythematosus; autoimmune disorder; inflammation; graft versus host reaction; immune rejection; intestinal immunity;

The invention relates to a novel human antibody (I), preferably a human monoclonal antibody which binds to an activation inducible lymphocyte immunomodulatory molecule (AILIM). (I) is useful for modulating signal transduction into a cell mediated by AILIM, for modulating proliferation of AILIM-expressing cells, for modulating production of a cytokine from AILIM-expressing cells, and for inducing antibody-dependent cytotoxicity against AILIM-expressing cells and/or immune cytolysis or apoptosis of AILIM-expressing cells and/or immune cytolysis or apoptosis of AILIM-expressing cells. (I) is useful for treating or prophylaxis of delayed type allergy. (I) is useful for treating or prophylaxis of delayed type allergy. (I) is useful for treating or prophylaxis of delayed type allergy. (I) is useful for treating or the prophylaxis of delayed type allergy. (I) is useful for treating or the prophylaxis of allergy the onset and/or advancement of the cheumatoid arthitis, multiple sclerosis, autoimmune thyroiditis, allergic contact-type dermatitis, chronic inflammatory dermatosis, systemic lugue erythematosus, insulin-dependent diabetes mellitus, psoriasis, autoimmune or allergic disorders, inflammatory dermatosis, psoriasis, autoimmune or allergic disorders, inflammatory dermatosis, obst reaction, graft versus host disease, immune rejection, graft versus host disease, immune rejection, graft versus host disease, inmune rejection, contact versus host disease, inmune rejection, contact versus host disease, inmune rejection disorders cansed by abnormal intestinal immunity, specifically inflammatory intestinal disorders such as ulcerative collitis, pneumonia, hepatitis, intestinal disorders such as ulcerative collitis, pneumonia, hepatitis, and pancreative collitis, pneumonia, hepatitis, and pancreaticis. (I) induces no serious anticenting delayed. (I) in a host. AAU142301 represent anti-human anti-human anticon mention anticon and sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 PGQAPRILIYGASTRATGIPDRFSGSGSGTDFTLTISRLEPEDFAVYYCQKYGTSAI-TF 119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a kappa chain of an antibody of the invention. The antibody is directed cytotoxic T-lymphocyte antipod.

4. Antibodies of the invention are composed of a heavy chain variable region, comprising a modified contiguous sequence from a FRI-FR3 sequence encoded by a human VH3-33 family gene. The modifications are contained in CDR1, CDR2 and/or framework regions. The antibodies may be used to inhibit CTLA-4 and down-regulate the immune system to treat hyperimmunity disorders (e.g. cancer). CTLA-4 stimulatory agents and proliferative disorders (e.g. cancer). CTLA-4 stimulatory agents may be used to used to up-regulate immune system to up-regulate immune system to up-regulate immunodeficient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    60 PGQAPRPLIYGVSSRATGIPDRFSGSGSGTDFTLTISRLEPEDFAVYYCQQYGISPFTFG 119

TITLE OF INVENTION: ANTIGEN BINDING FRAGMENTS H11, THAT
SPECIFICALLY DETECT CANCER CELLS, NUCLEOTIDES ENCODING THE
FRAGMENTS, AND USE THEREOF FOR THE PROPHYLAXIS AND
DETECTION OF CANCERS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 PGQAPRLLIYGASTRATGIPDRFSGSGSGTDFTLTISRLEPEDFAVYYCQKYGTS---A 116

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-US-WILL CLOCK THE APPLICATION US/09472087

Patent No. 668736

GENERAL INFORMATION:

APPLICANT: HANSON, DOUGLAS C.
APPLICANT: HANSON, DOUGLAS C.
APPLICANT: HANSON, BILEN E.

APPLICANT: HANSON, SIEVEN C.
APPLICANT: HANSON, GEOFFREY

APPLICANT: HANSON, GEOFFREY

APPLICANT: CORVALAN, JOSE R.

TITLE OF INVENTION: HUMAN MONOCLONAL ANTIBODIES TO CTLA-4

FILE REFERENCE: ABX-PPI

CURRENT APPLICATION NUMBER: US/09/472,087

CURRENT FILICATION NUMBER: 06/113,647

PRIOR PLICATION NUMBER: 06/113,647

RIOR PLICATION NUMBER: 06/113,647

RIOR PLICATION NUMBER: 06/113,647

ROUGHAND BATE: 1999-12-23

NUMBER OF SEQ ID NOS: 147

SEQ ID NO 14

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

R; Cuisinier, A.M.; Gauthier, L.; Boubli, L.; Fougereau, M.; Tonnelle, C. submitted to the EMBL Data Library, June 1992
A; Description: Mechanisms that generate human immunoglobulin diversity operate from A; Reference number: S1585
A; Reference number: S1585
A; Reference number: S1585
A; Crossidues: Dealiminary
A; Molecule type: mRNA
A; Status: preliminary
A; Cross-references: EMBL: Z14213; NID: G37795; PIDN: ChA78582.1; PID: G37796
C; Genetics:
A; Introns: 16/1
C; Superfamily: immunoglobulin V region; immunoglobulin homology
C; Keywords: heterotetramer; immunoglobulin
F; 34-117/ Domain: immunoglobulin homology <IMM>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          from
